wherever you are

The company that received this certificate has participated in important work against climate change by planting tree seedlings. These tree seedlings will be planted in peatland retired from peat production with great conditions for afforestation. Each tree will absorb an average of 600 kilograms (kg) of carbon dioxide over its life cycle. This is equivalent of 32 day carbon footprint of an average European.

Location of plantations: Kohiseva, Sonkajärvi, Finland  
The type of tree seedling planted: Pine (*pinus sylvestris*)
